

Living Garden a permaculture garden project

Landguet Ried at Köniz Switzerland

Our vision

Creating a large garden on a meadow area, making the soil more fertile with a colourful fan of plant cultures; re-establishing biodiversity.

As a special habitat for recreation and being for people in nature.

Designed, planned in the thought systems and design principles of permaculture. Then, in stages, to implement the goals set, to realise elements. The location is very beautiful and bordered by the edge of the forest and the sky.

Our goals

Breaking down/converting land into fertile soil; growing useful and ornamental plants, shrubs and trees; creating elements that are viable in the long term.

Implement several functional elements as infrastructure.

Achieved goals

to date a wooden house has been rebuilt and a sufficient resource area has been created for biomass composting. A water supply as a pipeline system is almost completed.

On a trial area, vegetables are grown in mixed cultures.

Initiators > Marcel Regli und Michael Khouri

Place > Languet Ried, 3172 Niederwangen, near Köniz and Berne, Switzerland

Questions to you

Are you interested in the project, do you see yourself participating?

How long do you want to enter a garden project (duration)?

Please send us an e-mail with your motivations and a short introduction of yourself; this will help us to know more of you.

For more information, check out our website (in German language).
